Wall Support Brackets Location Guide:

Table below should be used as guidance only! Support brackets should be affixed and radiator should be held against the wall to mark the bracket locations using a pencil.

Product Code	Product Width & Height		Wall Support Bracket Points	
	Width	Height	Horizontal (HB)	Vertical (VB)
EMR5080	500mm	800mm	80mm (+/- 4mm)	620mm (+/- 4mm)
EMR5012	500mm	1232mm	80mm (+/- 4mm)	1052mm (+/- 4mm)

To operate the towel radiator:

- Turn the bleed valve open with the help of a screwdriver. Then turn on the inlet valve and let water into the radiator.
- Check all connection points to ensure there are no leakages.
- Wait until water overflows through the bleed valve as this would mean that there is no air trapped in the radiator.
- Turn off the bleed valve and then turn on the outlet valve. The radiator is now in operation.

Maintenance:

- The maximum operating pressure and water temperature should be 10 bar and 100°C (212°F) respectively.
- If the product is not to be used for long periods of time, it should remain filled containing rust inhibitor to prevent corrosion. However, if/when the ambient temperature is expected to fall below 0°C (32°F), you are advised to drain this product to prevent possible frost damage.
- If the water temperature in the central heating system is set to higher values than the UK average (60°C to 70°C), the surface of the radiator may become too hot for children, elderly and infirm people. Place a warning mark near the radiator in order to avoid scolding.
- This radiator must only be cleaned with a piece of cloth dipped in warm soapy water. Do NOT use any products containing chemicals as they may damage the chrome plating or paint.
